Summary

Proactive, results-driven System Administrator with 6+ years at World Wide Technology supporting enterprise lab infrastructure and customer-facing environments. Strong foundation in VMware vSphere/vCloud, networking, QA, and technical support, with a focus on automation and AI enablement to improve reliability, documentation quality, and operational efficiency.

Experience

System Administrator, Advanced Technology Center (ATC) — World Wide Technology (2+ years — Present)

- Primary technical support contact for ATC engineers; resolve complex system and infrastructure issues.
- Perform rigorous QA testing for WWT.com platform labs (performance, security, and functionality) prior to deployment.
- Develop and implement AI solutions and automation to reduce manual task processing and improve consistency.
- Led overhaul of internal documentation to accelerate onboarding and improve knowledge discovery.

Data Center Operations — World Wide Technology ATC (2 years)

- Maintained physical and virtual infrastructure in the ATC data center; ensured high availability for critical systems and labs.
- Racked, stacked, and cabled server/network hardware; maintained organized, standards-driven environments.
- Administered imaging server and install/de-install workflows; partnered with cross-functional teams for seamless integration.

Wireless Technician — North American Integration Center (4 years)

- Integrated and configured large-scale AT&T; networking equipment with strong QA focus.
- Executed complex network deployments on schedule in collaboration with cross-functional teams.
- Performed detailed configuration validation to minimize post-deployment issues.

Selected Enterprise Solutions

- CoEdit AI Grammar Check — integrated LLM + embeddings into QA workflow with editor interface for human review.
- ATC Docs Overhaul & AI Readiness — improved usability/search/performance and added AI image captioning for accessibility and future ingestion.
- ATC Docs Copilot — proof of concept generating tutorials from documentation; demonstrated emergent capability to generate lightweight tools.
- Automated Firewall Rule Testing — automated validation framework for large-scale firewall migration in ATC vCloud environment (active).

Technical Skills

Infrastructure & Ops	AI & Development
• VMware vSphere (VCIX/VCP), vCloud, nested virtualization • Linux, Windows Server, Windows 11 • Networking: TCP/IP, DNS, routing & switching (CCNA) • Kubernetes, system administration, QA, technical support	• Python (NumPy), API/JSON, Streamlit • LLMs (Llama 3), prompt engineering, embeddings • GitHub Actions, React.js, HTML/CSS • Tools: nmap, troubleshooting, documentation systems

Certifications

VMware Certified Implementation Expert (VCIX-DCV), Microsoft Certified: Azure AI Engineer Associate, VMware Certified Professional - DCV 2024 (VCP-DCV), Cisco Certified Network Associate (CCNA), Google Cloud Certified - Cloud Digital Leader
